

Experiment 2: Library Book Reservation System

Aim

To design and develop a Library Book Reservation System using Zoho Creator, a cloud-based SaaS platform, that enables students to reserve books online, maintain reservation records, and manage book availability efficiently.

Procedure

Step 1:

Log in to Zoho Creator using your account.

Step 2:

Click Create New Application.

Step 3:

Enter the application name as: Library Book Reservation System

Step 4:

Create a form named: Book Reservation

Step 5:

Add the following fields:

Field Name	Field Type
Student Name	Single Line
Student ID	Number
Book Title	Single Line
Author	Single Line
Book Category	Drop Down
Reservation Date	Date
Return Date	Date
Number of Books	Number
Fine	Currency

Reservation Status	Drop Down
Book Status	Drop Down

Step 6:

Configure the drop-down values.

Book Category

- Fiction
- Non-Fiction
- Science
- Technology
- History
- Biography

Reservation Status

- Pending
- Approved
- Rejected

Book Status

- Available
- Reserved
- Issued

Step 7:

Create workflows to validate user inputs, such as ensuring the return date is after the reservation date and calculating fines if applicable.

```

if(input.Number_Of_Book != null)
{
    input.Fine = 0;
}

```

```
input.Book_Status = "Reserved";
```

```
alert "📖 Book Reserved Successfully!" + "\n\nReservation ID : " + input.Reservation_Status +  
"\nStudent Name : " + input.Student_Name + "\nBook Title : " + input.Book_Title + "\nBook  
Status : " + input.Book_Status + "\nReservation Date : " + input.Reservation_Date;
```

Step 8:

Create a **Book Reservation Report** to display all reservation records.

Step 9:

Test the application by entering sample student and book details and verify that the reservation is successfully recorded.

The screenshot displays the 'Library Book Reservation System' interface. A modal window is open, showing a confirmation message: '📖 Book Reserved Successfully!'. Below the message, the reservation details are listed: 'Reservation ID : Pending', 'Student Name : SHANMUGAPRIYA', 'Book Title : CAN WE BE STRANGER AGAIN?', 'Book Status : Reserved', and 'Reservation Date : 28-Jul-2026'. An 'OK' button is at the bottom of the modal. In the background, the 'Book Reservation' form is visible, with fields for Student Name (SHANMUGAPRIYA), Student ID (192524410), Book Title (CAN WE BE STRANGER AGAIN?), Author (JASMITHA), Book Category (Choice 2), Reservation Date (28-Jul-2026), Return Date (15-Aug-2026), Number of Book (2), Fine (0.00), Reservation Status (Pending), and Book Status (Reserved). The left sidebar shows the navigation menu with 'Book Reservation' and 'Book Reservation Report' options. The top right corner indicates a trial expires in 10 days and provides links for 'Upgrade', 'Edit this application', and 'Help'.

Implementation

The Library Book Reservation System was implemented using Zoho Creator forms, workflows, and reports. The system allows students to reserve books by entering their details, book information, reservation date, and return date. The reservation status and book status are automatically updated based on the reservation process. After the reservation is successfully submitted, a confirmation message displaying the reservation details is shown to the user. Reports are generated to manage and monitor all book reservation records efficiently through the cloud platform.
