

Experiment 1: Airline Ticket Booking System

Aim

To design and develop an Airline Ticket Booking System using Zoho Creator that enables users to book flight tickets, calculate the total fare, and generate booking confirmation automatically.

Procedure

Step 1:

Log in to Zoho Creator.

Step 2:

Click Create New Application.

Step 3:

Enter the application name: Airline Ticket Booking System

Step 4:

Create a form named: Airline Ticket

Step 5:

Add the following fields:

FIELD NAME	FIELD TYPE
Phone	Phone
Name	Name
Age	Number
From	Single Line
To	Single Line
Email Id	Email
Number Of Passenger	Number

Date	Date
Cost Of Ticket	Currency
Passenger Id	Auto Number
Flight No	Single Line
Total	Currency

Step 6:

Save the form.

Step 7:

Go to: **Workflow → On User Input**

Choose **The Field: Number Of Passenger**

Step 8:

Write the Deluge script:

```

if(input.Cost_Of_Ticket != null &&
input.Number_Of_Passenger1 != null)
{
    input.Total = input.Cost_Of_Ticket *
input.Number_Of_Passenger1;
}

alert " 🎫 Ticket Successfully Booked!\n\nPassenger Name : "
+ input.Name + "\nFlight No : " + input.flight_no + "\nTotal
Amount : ₹" + input.Total;

```

Step 9:

Save the workflow.

Step 10:

Open the application and enter the passenger details.

Step 11:

Enter the Cost of Ticket and Number of Passenger.

Step 12:

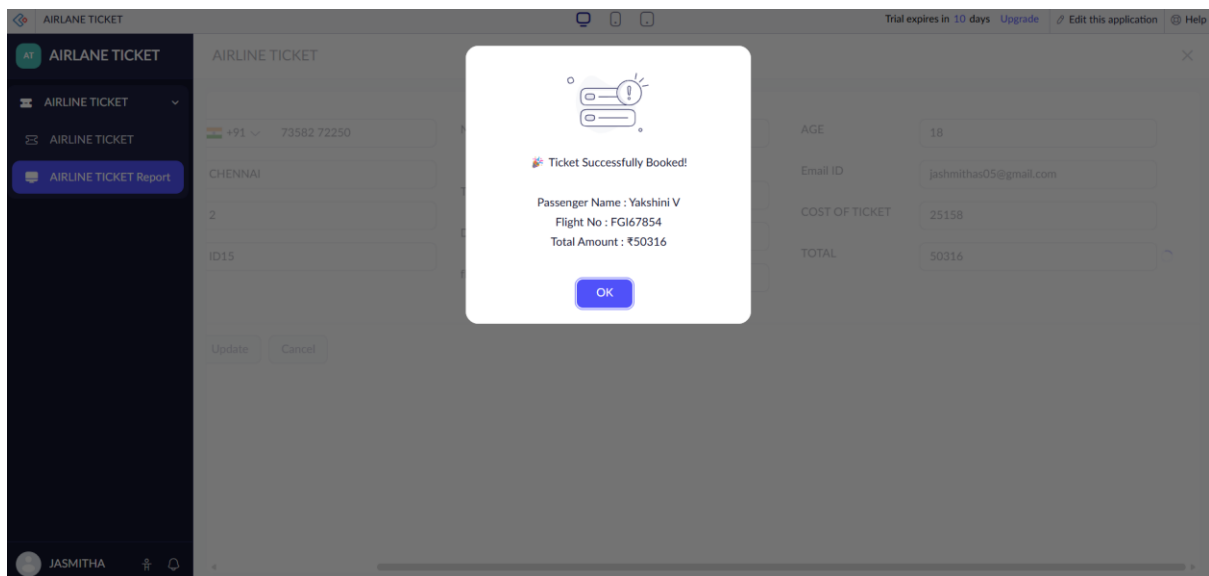

The application automatically calculates and displays the Total amount.

Step 13:

Click Submit to save the booking.

Step 14:

View the saved booking details in the report.

Implementation

The Airline Ticket Booking System was implemented using Zoho Creator forms, workflows, and reports. The system automatically calculates the total

fare based on the ticket price and number of passengers. After the booking is completed, the booking status is updated and a confirmation message is displayed. Reports are generated to manage passenger booking details efficiently.
