

EXPERIMENT 5: A PRODUCT SELLING SYSTEM USING ZOHO CREATOR

Aim:

To develop a Product Selling System using Zoho Creator, a cloud-based SaaS platform, that allows users to enter product details, automatically calculates the total selling amount, and stores product records in the cloud.

Procedure

Step 1:

Log in to Zoho Creator.

Step 2:

Click Create New Application.

Step 3:

Enter the application name as: Product Selling System

Step 4:

Create a form named: Product Selling System

Step 5:

Add the following fields:

Field Name	Field Type
Product Name	Single Line
Category	Drop Down
Quantity	Number
Price	Currency

Total	Currency
Seller Name	Name
Phone Number	Phone

Step 6:

Create a workflow to calculate the total amount automatically.

```
if(input.Price != null && input.Quantity != null)
{
    input.Total = input.Price * input.Quantity;
}
```

Step 7:

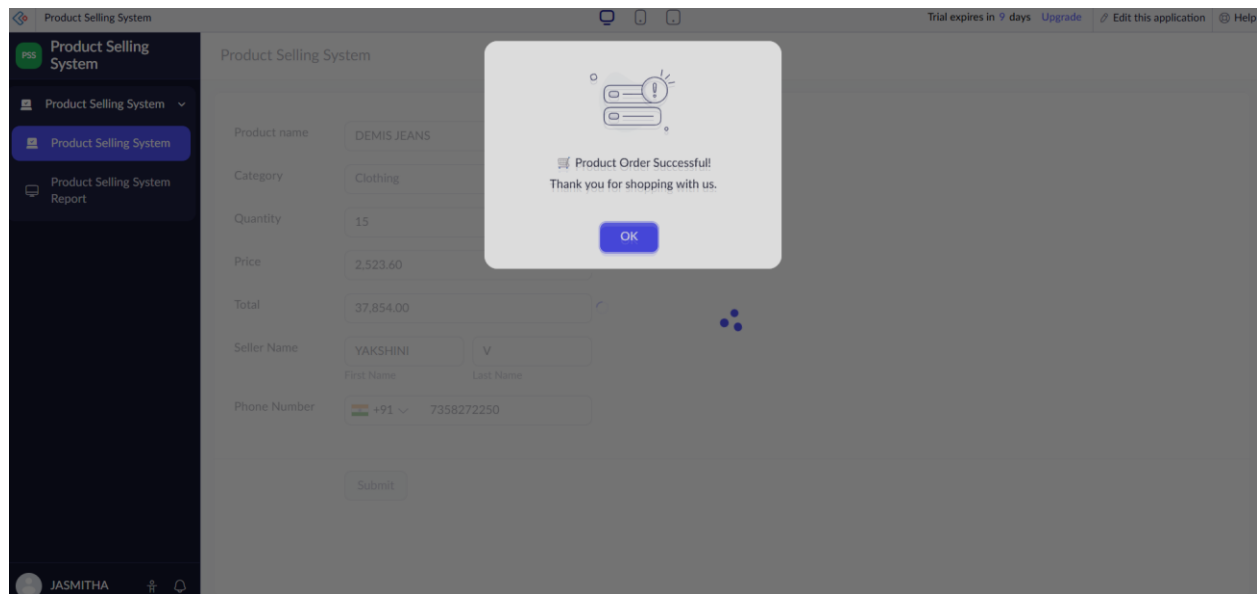

Create an **On Success** workflow to display a confirmation message. alert " Product Order Successful!\nThank you for shopping with us.";

Step 8:

Create a report named Product Selling Report to display all product selling records.

Step 9:

Run the application, enter product details, submit the form, and verify that the total amount is calculated automatically and the confirmation message is displayed.

Implementation

The Product Selling System was implemented using Zoho Creator forms, workflows, and reports. The system allows users to enter product details such as product name, category, quantity, price, seller name, and phone number. The total selling amount is automatically calculated based on the product price and quantity using a workflow. After the product details are successfully submitted, a confirmation message is displayed to the user. The product information is securely stored in the Zoho Creator cloud database, and reports are generated to manage product selling records efficiently, demonstrating the Software as a Service (SaaS) model.
